

Dogwood Forest Memory Care An inspired approach to memory care

Dogwood Forest™ Memory Care Therapies & Programs:

Our Memory Care residents live life to their highest potential, even those with varying stages of dementia, by living in our stress-free environments and utilizing our clinically proven non-drug therapies, including:

Reminiscence Therapy - activities designed to target long-term memories that are more resistant to aging.

Achieving a Person Centered Care Environment & SELF™ Program - cognitive stimulation & brain exercises.

FiveSense™ Therapies - activities and programming designed to enhance long-term memory and improve life quality through the five senses.

Eat to Remember™ - our delicious meals are prepared with the foods and nutrients proven to aid memory and slow down the progression of dementia.

Inspirations Neighborhood™ - a secure, comfortable and home-like community filled with familiar sights, sounds and scents from the past.

Orientation Therapy - provides cues to reassure and inform in order to increase autonomy and confidence.

Our non-drug therapy programs help access long-term memories, which are more resistant to dementia and can help root seniors in a sense of time and place.

Activities, sounds, scents, and innovative surroundings stimulate the senses for memory recall to keep seniors feeling connected. basic needs to working with them to improve their memory and feel safe, stable, and loved. Everyone has a rich life story that deserves to be shared and celebrated.
